### ***What is Microsoft Dynamics AX?***

Microsoft Dynamics AX ERP software is the most prestigious choice from the Microsoft inventory of business systems. It is a truly modern, fully integrated, adaptable, 3 dimensional business management system which uses modern technologies to help you and your staff make confident and informed business decisions.

Microsoft Dynamics AX has been rewritten from the ground up embracing today's economic challenges. Using a familiar user interface to other Microsoft Software, it provides a simple, user friendly and common environment in which to work - as all information can be obtained from within one screen. It incorporates key functionality to visualise your entire operation from sales order entry through to the invoicing of goods dispatched.

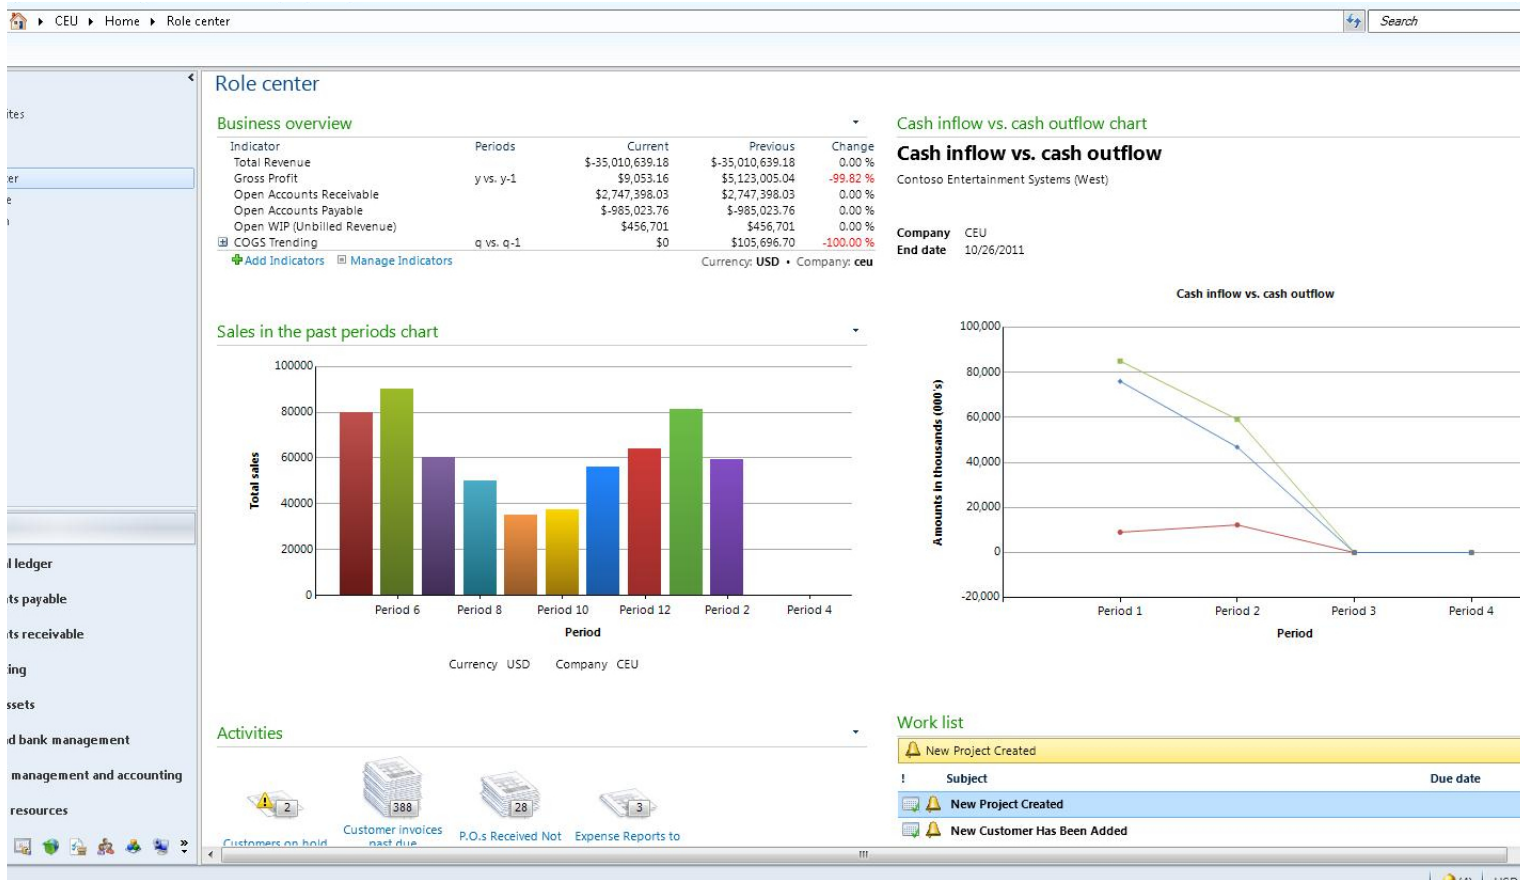

The software will automate critical

business processes, streamline procedures and eliminate manual data re-entry and error meaning your time and resources are not wasted.

Connect all of your sites through a 'single instance' of Microsoft Dynamics AX allowing for independent operation but with 'group' level analysis.

When production is conducted within many sites, Microsoft Dynamics AX lets you manage production and workflow across the entire enterprise. In addition, the Microsoft Dynamics AX system allows Inventory and Resource Requirements Management along with the Sequencing and Scheduling of tasks and Operations as if they were within one location.

Microsoft Dynamics AX from Syscom unifies the manufacturing process into one multi-site operation.

## What you will get with Microsoft Dynamics AX

**Management Services:** Sales Order, Production, Project, Inventory, Purchase and Transport

### Shop Floor Data Capture

### Shop Floor and Inventory costing

### Item Data Base

### Production Control:

Master Production Scheduling, MRP I and II, Capacity Planning, Job Allocation/Accounting and Load Planning

### Finance:

Accounts: Payable/Receivable, Standard Product Costing, Ledger Management, Asset Management and Human Resources

Microsoft Dynamics AX is one of a limited number of truly global systems that provides multi-site, multi-lingual and multi-currency capabilities for more than 40 countries including local tax and regulatory requirements with a full suite of financial tools and ledger management.

Unlike other business management systems, that force you to use specialised toolsets, Microsoft Dynamics AX uses the latest technology stack updated as new releases are published.

Although Microsoft Dynamics AX has an inbuilt CRM and financial suite of tools, you may wish to remain using your own preferred tools set. Microsoft Dynamics AX through its import/export routines allow full integration of other Financial and CRM software.

Microsoft Dynamics AX is built with a layered architecture so you can customise one layer without affecting the functionality on others. This offers you high-speed server-side performance and the ability to easily scale your IT infrastructure to evolve with your company growth. Additionally, the object-oriented architecture of Microsoft Dynamics AX is different than many of its

competitors because it can scale up to support large distribution businesses, and scale down to support the specific needs of smaller companies. This means that you can adapt and upgrade your ERP system over time with less risk and expense.

The adaptable nature of Microsoft Dynamics AX suits unique business processes. As a result, your workforce can track changes in the market, adapting as needed to stay ahead of negative impact.

### Microsoft Dynamics AX from Syscom

Microsoft Dynamics AX is already one of the World's best 'out of the box' ERP systems. Its versatility, adaptability and ease of use is, in our considered opinion one of the best value ERP products on the market today. However, when applied specifically to how an industry operates or the circumstances in which they work, there will always be nuances and specific functions that are not standard.

Syscom - having recruited all of its staff from the industries we supply, has taken this impressive product and specifically adapted it with the functionality of software already used within the industries kept in mind.
